the *Dietary  
Guidelines*

Dietary  
Guidelines  
for Americans

# 2020 - 2025

# About the *Dietary Guidelines for Americans*

- The *Dietary Guidelines* provides science-based advice on what to eat and drink to promote health, help reduce risk of chronic disease, and meet nutrient needs.
- Serves as the cornerstone of federal nutrition programs and policies
- Mandated to reflect the preponderance of scientific evidence; published jointly by USDA and HHS every five years.
- Targeted to professionals who work with the general public to help them consume a healthy and nutritionally adequate diet and establish policies and services to support these efforts.

# Developing the *Dietary Guidelines for Americans*

# The Guidelines

Follow a healthy dietary pattern at every life stage.

Customize and enjoy nutrient-dense food and beverage choices to reflect personal preferences, cultural traditions, and budgetary considerations.

2

3

Focus on meeting food group needs with nutrient-dense foods and beverages, and stay within calorie limits.

4

Limit foods and beverages higher in added sugars, saturated fat, and sodium, and limit alcoholic beverages.

1

# Guideline 1: Follow a healthy dietary pattern at every life stage.

- At every life stage—infancy, toddlerhood, childhood, adolescence, adulthood, pregnancy, lactation, and older adulthood—it is never too early or too late to eat healthfully.
- **For about the first 6 months of life**, exclusively feed infants human milk. Continue to feed human milk through at least the first year of life, and longer if desired. Feed iron-fortified infant formula during the first year when human milk is unavailable. Provide supplemental vitamin D beginning soon after birth.
- **At about 6 months**, introduce nutrient-dense complementary foods. Introduce potentially allergenic foods along with other complementary foods. Encourage infants and toddlers to consume a variety of foods from all food groups. Include foods rich in iron and zinc, particularly for infants fed human milk. Avoid foods and beverages with added sugars. Limit those higher in sodium.
- **From 12 months through older adulthood**, follow a healthy dietary pattern to meet nutrient needs, help achieve a healthy body weight, and reduce the risk of chronic disease.

## Guideline 2: Customize and enjoy nutrient-dense food and beverage choices to reflect personal preferences, cultural traditions, and budgetary considerations.

- A healthy dietary pattern can benefit all individuals regardless of age, race, or ethnicity, or current health status. The *Dietary Guidelines* provide a framework intended to be customized to individual needs and preferences, as well as the foodways of the diverse cultures in the United States.

# Guideline 3: Focus on meeting food group needs with nutrient-dense foods and beverages, and stay within calorie limits.

Nutrient-dense foods provide vitamins, minerals, and other health-promoting components and have no or little added sugars, saturated fat, and sodium.

A healthy dietary pattern consists of nutrient-dense forms of foods and beverages across all food groups, in recommended amounts, and within calorie limits.

The core elements that make up a healthy dietary pattern include:

- **Vegetables of all types**—dark green; red and orange; beans, peas, and lentils; starchy; and other vegetables
- **Fruits**, especially whole fruit
- **Grains**, at least half of which are whole grain
- **Dairy**, including fat-free or low-fat milk, yogurt, and cheese, and/or lactose-free versions and fortified soy beverages and yogurt as alternatives
- **Protein foods**, including lean meats, poultry, and eggs; seafood; beans, peas, and lentils; and nuts, seeds, and soy products
- **Oils**, including vegetable oils and oils in food, such as seafood and nuts

# Guideline 4: Limit foods and beverages higher in added sugars, saturated fat, and sodium, and limit alcoholic beverages.

A healthy dietary pattern doesn't have much room for extra added sugars, saturated fat, or sodium—or for alcoholic beverages.

## Limits are:

- **Added sugars**—Less than 10% of calories per day starting at age 2. Avoid foods and beverages with added sugars for those younger than age 2.
- **Saturated fat**—Less than 10% of calories per day starting at age 2.
- **Sodium**—Less than 2,300 milligrams per day—and even less for children younger than age 14.
- **Alcoholic beverages**—Adults of legal drinking age can choose not to drink or to drink in moderation by limiting intake to 2 drinks or less in a day for men and 1 drink or less in a day for women, when alcohol is consumed. Drinking less is better for health than drinking more. There are some adults who should not drink alcohol, such as women who are pregnant.

# What is a Dietary Pattern?

- Represents the totality of what individuals habitually eat and drink
- The parts of the pattern act synergistically to affect health
- May better predict overall health status and disease risk than individual foods or nutrients
- A healthy dietary pattern consists of nutrient-dense forms of foods and beverages across all food groups, in recommended amounts, and within calorie limits

# Healthy Eating Can Promote Health and Reduce Risk of Chronic Disease

Guideline

## Children and Adolescents

- Lower adiposity
- Lower total and low-density lipoprotein (LDL) cholesterol

## Women Who Are Pregnant or Lactating

- Favorable cognitive development in the child
- Favorable folate status in women during pregnancy and lactation

## Birth Through 23 Months

- Lower risk of overweight and obesity
- Lower risk of type 1 diabetes
- Adequate iron status and lower risk of iron deficiency
- Lower risk of peanut allergy
- Lower risk of asthma

## Adults, Including Older Adults

- Lower risk of all-cause mortality
- Lower risk of cardiovascular disease
- Lower risk of cardiovascular disease mortality
- Lower total and LDL cholesterol
- Lower blood pressure
- Lower risk of obesity
- Lower body mass index, waist circumference, and body fat
- Lower risk of type 2 diabetes
- Lower risk of cancers of the breast, colon, and rectum
- Favorable bone health, including lower risk of hip fracture

# Dietary Components of Public Health Concern – Underconsumed

- Calcium, potassium, dietary fiber, and vitamin D are considered dietary components of public health concern for the general U.S. population because low intakes are associated with health concerns
- If a healthy dietary pattern is consumed, amounts of calcium, potassium, and dietary fiber can meet recommendations
- Vitamin D recommendations are harder to achieve through natural sources from diet alone and would require consuming foods and beverages fortified with vitamin D
- In many cases, taking a vitamin D supplement may be appropriate

# Dietary Components of Public Health Concern

- **Calcium** – milk & milk products, spinach, tofu, fortified OJ
- **Potassium** – fruits, vegetables, milk, yogurt, clams
- **Dietary Fiber** – whole grain bread/cereal, fruits, vegetables, nuts & seeds
- **Vitamin D** – trout, salmon, raw mushrooms, fortified milk, fortified OJ

# Adherence of the U.S. Population to the *Dietary Guidelines* Across Life Stages, as Measured by Average Total Healthy Eating Index-2015 Scores

The Healthy Eating Index measures how closely food and beverage choices align with the *Dietary Guidelines*. A higher total score indicates a higher quality diet.

# Dietary Intakes Compared to Recommendations

**NOTE:** Recommended daily intake of whole grains is to be at least half of total grain consumption, and the limit for refined grains is to be no more than half of total grain consumption.

**Data Source:** Analysis of What We Eat in America, NHANES 2013-2016, ages 1 and older, 2 days dietary intake data, weighted.  
Recommended Intake Ranges: Healthy U.S.-Style Dietary Patterns

# Vegetables

- Healthy dietary patterns include a variety of vegetables from all five vegetable subgroups
  - » Include all fresh, frozen, canned, and dried options in cooked or raw forms, including 100% vegetable juices
  - » Nutrient-dense forms have limited additions such as salt, butter, or creamy sauces
- Almost 90% of Americans do not meet the recommendation for vegetables
- Most people need to increase total vegetable intake and intake from all vegetable subgroups, shift to nutrient-dense forms, and increase the variety of different vegetables consumed over time
- Strategies to increase vegetable intake include increasing the vegetable content of mixed dishes and eating more vegetables as side dishes or snacks—keeping these nutrient-dense

# Customizing the *Dietary Guidelines* Framework: Vegetables

- **Dark-Green Vegetables:** All fresh, frozen, and canned dark-green leafy vegetables and broccoli, cooked or raw: for example, amaranth leaves, bok choy, broccoli, chamnamul, chard, collards, kale, mustard greens, poke greens, romaine lettuce, spinach, taro leaves, turnip greens, and watercress.
- **Red and Orange Vegetables:** All fresh, frozen, and canned red and orange vegetables or juice, cooked or raw: for example, calabaza, carrots, red or orange bell peppers, sweet potatoes, tomatoes, 100% tomato juice, and winter squash.
- **Beans, Peas, Lentils:** All cooked from dry or canned beans, peas, chickpeas, and lentils: for example, black beans, black-eyed peas, bayo beans, chickpeas (garbanzo beans), edamame, kidney beans, lentils, lima beans, mung beans, pigeon peas, pinto beans, and split peas. Does not include green beans or green peas.
- **Starchy Vegetables:** All fresh, frozen, and canned starchy vegetables: for example, breadfruit, burdock root, cassava, corn, jicama, lotus root, lima beans, plantains, white potatoes, salsify, taro root (dasheen or yautia), water chestnuts, yam, and yucca.
- **Other Vegetables:** All other fresh, frozen, and canned vegetables, cooked or raw: for example, asparagus, avocado, bamboo shoots, beets, bitter melon, Brussels sprouts, cabbage (green, red, napa, savoy), cactus pads (nopales), cauliflower, celery, chayote (mirliton), cucumber, eggplant, green beans, kohlrabi, luffa, mushrooms, okra, onions, radish, rutabaga, seaweed, snow peas, summer squash, tomatillos, and turnips.

# Fruits

- Includes whole fruits and 100% fruit juice
  - » At least half should come from whole fruit (fresh, canned, frozen, and dried forms)
  - » Juice should be 100% juice and always pasteurized or 100% juice diluted with water (without added sugars)
  - » When selecting canned fruit, choose options that are canned with 100% juice or options lowest in added sugars
- About 80% of Americans do not meet fruit recommendations
- Most people would benefit from increasing their intake of fruit, mostly as whole fruits in nutrient-dense forms
- Strategies to increase fruit intake include choosing more whole fruits as snacks and including them in meals

# Varieties of Fruits

- All fresh, frozen, canned, and dried fruits and 100% fruit juices: for example, apples, Asian pears, bananas, berries (e.g., blackberries, blueberries, currants, huckleberries, kiwifruit, mulberries, raspberries, and strawberries); citrus fruit (e.g., calamondin, grapefruit, lemons, limes, oranges, and pomelos); cherries, dates, figs, grapes, guava, jackfruit, lychee, mangoes, melons (e.g., cantaloupe, casaba, honeydew, and watermelon); nectarines, papaya, peaches, pears, persimmons, pineapple, plums, pomegranates, raisins, rhubarb, sapote, and soursop.

**Start Simple with MyPlate**  
Start simple and take healthy eating one step at a time.

- Focus on whole fruits**  
Include fruit at breakfast. Two whole-grain pancakes with your favorite fruit, add berries to pancakes, or mix dried fruit into hot cereal.
- Vary your veggies**  
Cook a variety of colorful veggies. Make extra vegetables and save some for later. Use them for a stew, soup, or a pasta dish.
- Vary your protein routine**  
Read food labels, try adding a new protein, like shrimp, beans, chicken, or beef.
- Make half your grains whole grains**  
Add brown rice to your pantry dishes. Combine your favorite vegetables and protein foods for a nutritious meal.
- Move to low-fat or fat-free milk or yogurt**  
Enjoy a low-fat yogurt parfait for breakfast. Top with fruit and nuts to eat in two more food groups.
- Drink and eat less sodium, saturated fat, and added sugars**  
Cook at home and read the ingredients to compare foods.
